Technische Universität Dresden (TUD), as a University of Excellence, is one of the leading and most dynamic research institutions in the country. Founded in 1828, today it is a globally oriented, regionally anchored top university as it focuses on the grand challenges of the 21st century. It develops innovative solutions for the world's most pressing issues. In research and academic programs, the university unites the natural and engineering sciences with the humanities, social sciences, and medicine. This wide range of disciplines is a special feature, facilitating interdisciplinarity and transfer of science to society. As a modern employer, it offers attractive working conditions to all employees in teaching, research, technology, and administration. The goal is to promote and develop their individual abilities while empowering everyone to reach their full potential. TUD embodies a university culture that is characterized by cosmopolitanism, mutual appreciation, thriving innovation, and active participation. For TUD, diversity is an essential feature and a quality criterion of an excellent university. Accordingly, we welcome all applicants who would like to commit themselves, their achievements, and productivity to the success of the whole institution.

The Boysen-TU Dresden Research Training Group for young researchers from Engineering, Social Sciences, Arts, and Humanities, co-financed by the Friedrich and Elisabeth Boysen Foundation and the Technische Universität Dresden, is offering a doctoral scholarship¹ from January 1, 2023, for a maximum of 3 years, subject to available funding. The interdisciplinary Research Training Group, in what is its fourth generation, is conducting research on the overarching topic Hydrogen Economy – Strategic element of a future GreenGas deal. It consists of four clusters. Cluster E: Hydrogen imports from the MENA region compared to hydrogen production in Germany combines four sub-projects (SP). A suitable person (m/f/x) is being sought to work on the topic SP E2: Plasma chemical synthesis of energy carriers for storage and transport of green hydrogen and as a basis for the production of e-fuels. The Chair of Coating Technologies for Electronics at the Faculty of Electrical and Computer Engineering at TU Dresden is responsible for the supervision. The interdisciplinary supervision takes place in the common rooms of the Research Training Group.

Abstract: In the PhD project, a scalable technology for the production of chemical energy storage, for example for safe, efficient transport from MENA countries or for integration into energy parks, is to be developed and compared with competing technologies. The aim is to investigate the synthesis of liquid media such as methanol by converting green hydrogen and carbon dioxide in electron beam generated plasmas at atmospheric or low vacuum conditions.

Applicants are expected to have an above-average academic degree in plasma physics, plasma chemistry, or electrical and computer engineering, as well as a high degree of willingness to engage in interdisciplinary work and research.

Accepting the scholarship obliges your presence in the research group's offices in Dresden on three fixed core days per week. Participation in the college's teaching program is compulsory (24 ETCS in 3 years).

TUD strives to employ more women in academia and research. We therefore expressly encourage women to apply. The University is a certified family-friendly university and offers a Dual Career Service. We welcome applications from candidates with disabilities. If multiple candidates prove to be equally qualified, those with disabilities or with equivalent status pursuant to the German Social Code IX (SGB IX) will receive priority for employment.

Please send your compelling application including a letter of motivation, curriculum vitae, copies of academic certificates or other relevant qualifications (language certificates, further training), and a max. 10-page sample text (e.g. final thesis, term paper, or publication) until November 21, 2022.

¹ The amount of the scholarship is based on the basic amount according to DFG criteria:
https://www.dfg.de/foerderung/programme/einzelfoerderung/forschungsstipendien/stipendienrechner/
(stamped arrival date of the university central mail service applies) with the **subject** “SP E2: Plasma chemical synthesis of energy carriers for storage and transport of green hydrogen and as a basis for the production of e-fuels”, preferably via the SecureMail Portal of the TU Dresden https://securemail.tu-dresden.de as **one** PDF document to **anna.martius@tu-dresden.de**. Alternatively, applications can also be sent to the following address: **TU Dresden, Boyesen-TU Dresden-Graduiertenkolleg, Frau Dr. Anna Martius, Helmholtzstr. 10, 01069 Dresden, Germany**. Please submit copies only, as your application will not be returned to you. Expenses incurred in attending interviews cannot be reimbursed.
